Fuel consumption and CO2 data applies to the German Market. The specified values are determined in accordance with certain test procedures. The specifications do not refer to an individual vehicle but serve only as a basis for comparing the different types of vehicles. In addition, the consumption figures achieved during normal driving may differ from the test values, depending in particular on special equipment fitted, vehicle loading, personal driving style, road and traffic conditions, environmental factors and conditions of the car

It is recommended that all TDI engines use a maximum of 50ppm diesel fuel or less
